

Nation's Position in International System: Block Model Approach

DECEMBER 9TH, 2019

Objective & Agenda

Purpose: To model a study after Ronald Breiger's work on "Structures of Economic Interdependence Among Nations" from the book, Continuities in Structural Inquiry for understanding network analysis for international trade.

Question: What is the positions of nations in the international system in 2008 and 2018 based on simultaneous exchange of different economic goods and CONCOR model?

Agenda

- Background & Theory
- Data
- Analysis
- Results
- Conclusions

Background

Brieger (1981) studies is a structuralist perspective to patterns in world economy

Based on the World System Theory and trade data for OECD countries in 1972:

- Can a procedure for categorizing states among their myriad import and export arrangements be found?
- The author posits yes and tests his hypothesis against empirical data.
- The core/periphery structure of the system is found to have multiple competing centers rather than just one center as implied above

CONCOR block Modeling:

- Iterates correlations among columns of R
- Splits the matrix into two structural equivalence blocks

Resulting Network Diagram for 1971 OECD data [from Dr. Padgett's Notes]

Data

 UN Comtrade Database Extract data ▾ Data Availability ▾ Metadata ▾ Reference ▾ Knowledge base API portal

<http://comtrade.un.org>

1. Type of product & Frequency

Type of product
☒ Goods ☐ Services

Frequency
☒ Annual ☐ Monthly

2. Classification

HS
☐ As reported ☐ 92 ☐ 96 ☐ 02 ☐ 07 ☐ 12 ☐ 17

SITC
☒ As reported * ☐ Rev. 1 ☐ Rev. 2 ☐ Rev. 3 ☐ Rev. 4

BEC
☐ BEC

3. Select desired data

Periods (year)

All or a valid period. Up to 5 may be selected.

Reporters

All or a valid reporter. Up to 5 may be selected. All may only be used if a partner is selected.

Partners

World, All, or a valid reporter. Up to 5 may be selected. All may only be used if a reporter is selected.

Trade flows

All or select multiple trade flows.

SITC (as reported) commodity codes

All, Total, AG[X] or a valid code. Up to 20 may be selected. If you know the code number, e.g. 01 - Live animals, type 01. To search by description type a word, e.g. rice.

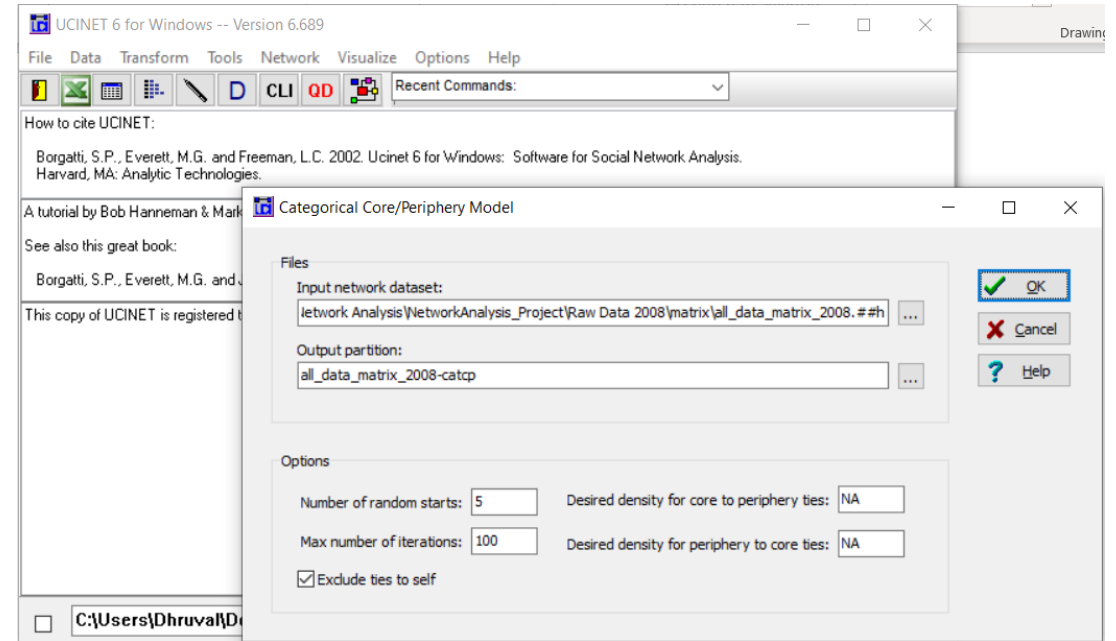

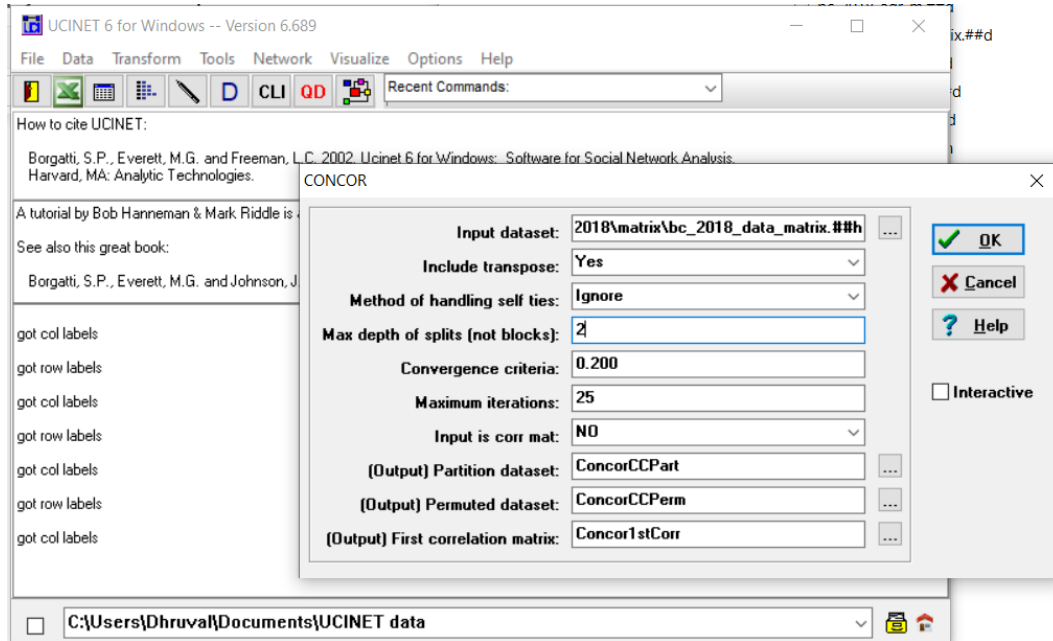

4. See the results

Issues opening CSV in Excel? [See this Microsoft how-to.](#)

- Data is collected from UN Comtrade Database
- The following data is downloaded:
 - Import/Export for same commodities that breiger considered for Year 2018 and 2008 for all countries in OECD + India, China, Brazil (ICB)
 - Goods trade for China for years: 2008 – 2010
- Data is processed using Pandas in python to:
 - Remove countries that are not in OECD or India, China Brazil
 - Create n by n adjacency matrix for countries for block modeling
 - Only consider 5th of the volume (In progress)
 - Create edgelist for China to conduct egocentric analysis of trade patterns (In-Progress)

Method

Using program **UCINET**:

- CONCOR
 - limiting the depth of split to 2
- Core/Periphery Analysis

Conclusions & Future Work

If we looked at the exact same 24 countries that Brieger did: the following forms the core: USA, UK, Germany, Belgium, Netherlands and France

- What is the effect of volume control?

With all OECD countries and India, China, Brazil in 2018 – China, Germany, USA, Japan form the core.

- Smaller group of countries in the core

With all OECD countries and China, Brazil – USA, Canada form the core

- Why? What is the role of financial crisis and how has China's participation changed from 2008 to 2018?

Additional measures to consider to assess world theory system?

- Services and intellectual transfer - to support/refute Wallerstein's world system idea of unequal development this would be an important consideration in knowledge economy.
 - This is currently limited by data availability
